may face after critical illness [4].

~~Sedation practice in the intensive care unit: a UK...~~

Sedation and analgesia are essential components of care for many mechanically ventilated patients in the intensive care unit (ICU). To choose an optimal strategy of medication use, it is necessary to understand the body of literature that forms the groundwork for evidence-based recommendations (1).

~~American Journal of Respiratory and Critical Care Medicine~~

Sedation and analgesia outside the operation theatre is a dynamic and systematic procedure intended to achieve the goals of optimum critical care management. In this regard, nurse anesthetists and intensive care nursing personnel are indispensable.
