~~Scar Tissue Pain: Treatment, Symptoms, Starting Years ...~~

A scar is an area of fibrous tissue that replaces normal skin after an injury. Scars result from the biological process of wound repair in the skin, as well as in other organs and tissues of the body. Thus, scarring is a natural part of the healing process.

~~Scar - Wikipedia~~

What is scar tissue? Scars are marks on the skin or tissue of the body, which form after trauma and can affect skin, muscles, ligaments and tendons. As part of the body's repair process, new protein (collagen) fibers replace the injured tissue and a scar is formed.

Laser therapy Laser or light therapy (pulses of light) can reduce the redness in a scar by targeting the blood vessels in the excess scar tissue. For some pitted scars, laser surgery (laser resurfacing) is used to try to make the scar flatter.

~~Scars Treatment NHS~~

Scar tissue forms when the body undergoes trauma or inflammation of your cells and tissue. In some cases, scar tissues link to form an adhesion, which is a band of scar tissue. The adhesion connects two internal parts, which may restrict movement or hinder things like organs from performing their intended functions.
